Pathophysiology of cardiovascular disease in diabetes ... The most common cause of death among adults with diabetes is cardiovascular disease (CVD). In this concise review on pathogenesis of

Diabetes And Cardiovascular Disease Pathophysiology And ---

Cardiovascular disease (CVD) is also the principal cause of death and disability among people with type 2 diabetes globally, with approximately two-thirds of deaths in people with diabetes attributable to CVD. 1 Insulin secretion declines with advancing age and this decline may be accelerated by genetic factors.

Diabetes and cardiovascular disease | GM

The symptoms of a heart attack include: Shortness of breath. Feeling faint. Feeling dizzy. Excessive and unexplained sweating. Pain in the shoulders, jaw, and left arm. Chest pain or pressure (especially during activity). Nausea.

Diabetes and Heart Disease: How Diabetes Affects The Heart

Hyperglycemia, which characterises diabetes, in combination with free fatty acids in the blood can change the makeup of blood vessels, and this can lead to cardiovascular disease. The lining of the blood vessels may become thicker, and this in turn can impair blood flow. Heart problems and the possibility of stroke can occur.

Diabetes and Heart Disease

Over time, high blood glucose from diabetes can damage your blood vessels and the nerves that control your heart and blood vessels. The longer you have diabetes, the higher the chances that you will develop heart disease. 1 People with diabetes tend to develop heart disease at a younger age than people without diabetes.

Diabetes, Heart Disease, and Stroke | NIDDK

Cardiovascular disease (CVD) is a class of diseases that involve the heart or blood vessels. CVD includes coronary artery diseases (CAD) such as angina and myocardial infarction (commonly known as a heart attack). Other CVDs include stroke, heart failure, hypertensive heart disease, rheumatic heart disease, cardiomyopathy, abnormal heart rhythms, congenital heart disease, valvular heart ...

Cardiovascular disease - Wikipedia

Over time, high blood sugar can damage blood vessels and the nerves that control your heart. People with diabetes are also more likely to have other conditions that raise the risk for heart disease: High blood pressure increases the force of blood through your arteries and can damage artery walls. Having both high blood pressure and diabetes can greatly increase your risk for heart disease.

Diabetes and Your Heart | CDC - Centers for Disease ---

Diabetes-related microvascular disease such as retinopathy and nephropathy are major causes of blindness and renal insufficiency. 1 Based on this scenario, a better understanding of the mechanisms underlying diabetic vascular disease is mandatory because it may provide novel approaches to prevent or delay the development of its complications.

Diabetes and vascular disease: pathophysiology, clinical ---

The pathophysiology of the link between diabetes and cardiovascular disease (CVD) is complex and multifactorial. Understanding these profound mechanisms of disease can help clinicians identify and treat CVD in patients with diabetes, as well as help patients prevent these potentially devastating complications.
