The machines which are operated in relation with electrical energy are called electric machines or electrical machines. In electrical machines, either input or output or both can be electricity.. Types of Electrical Machines. The electric machines are of three main types, transformer, generator, and motor. Electrical Transformer: In the transformer, both input and output are electrical power.

Electrical Machines works on the principle of Electromechanical Energy Conversion which means the Electrical Energy is converted to mechanical & vice versa. The Electrical Machines are categorised into the following categories i.e Electrical Transformer, A.C Machines & Induction Machines, Fractional Kilowatt Motors, DC Machines.
